

The best way to enjoy your iPod/iPhone at home — the highest sound quality, the most convenience.

Keep your iPod/iPhone handy while hearing music from a powerful speaker unit in a different location.

### Easy to Use

- Speaker unit can be placed in any out-of-the-way location
- Easy operation (auto power on/off and volume control sync)
- Transmitter unit is small enough that you can carry the iPod/iPhone around and talk on the iPhone with the transmitter attached
- Cradle for setting the iPod/iPhone on a table, etc.
- Low power consumption
- Four colour variations to match your iPod and room

### High Sound Quality

- Uses lossless (uncompressed) signal transmission to achieve wireless sound quality
- Strong, rich bass sound
- Perfect synchronisation between sound and image for movies

#### Main Specifications

Maximum Output Power	15 W + 15 W (6 ohms, 1 kHz, 10% THD)
Speaker System	8cm (3-1/8") full-range cone, bass-reflex
Frequency Response	60 Hz-20 kHz
Supported iPod	iPod (5th generation), iPod classic, iPod nano and iPod touch
Standby Power Consumption	1 W
Dimensions (W x H x D)	350 x 128 x 125 mm 13-3/4" x 5" x 4-15/16"
Weight	1.7 kg; 3.4 lbs.

Gray

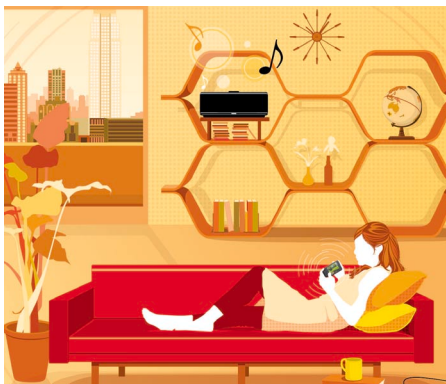

Pink

• The PDX-50 is offered with black, blue, gray and pink. • iPod not included with PDX-50.

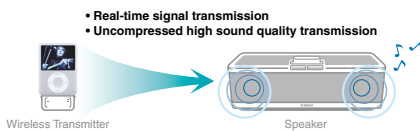

## Put more music in your life and enjoy great sound quality plus full control from your iPod...without caring about where the speaker is.

There are plenty of iPod dock units that deliver bigger sound from an iPod, including some wireless units, but the PDX-50 has got them all beat for quality and convenience. Air Wired lossless signal transmission ensures excellent sound quality, while the two 8cm speakers (larger than most other dock units) deliver powerful sound with robust bass. Best of all the PDX-50 takes convenience to a new level. The speaker unit can be placed anywhere in the room, while the iPod/iPhone can either be carried around with the transmitter or set in the handy cradle. The PDX-50 – it's the best choice for iPod listening at home.

### Superior Sound Quality

The PDX-50 delivers much better sound quality than other wireless systems. That's because unlike systems that use Bluetooth technology to send compressed data, the PDX-50 uses Air Wired technology to send uncompressed data (linear PCM transmission), so there is no loss of signal data. Add a Yamaha-quality 15W x 2 amplifier and two large 8cm (3-1/4") speaker units, and you have a top-class sound system for enjoying your iPod/iPhone music library.

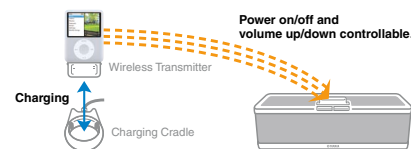

Yamaha Air Wired technology Principle

### Perfect Sound Syncing with Movies Both Bluetooth and WiFi wireless systems

transmit data with a delay, which means that when you watch movies or videos on your iPod, the sound is not synced to the picture. The PDX-50 features real-time signal transmission, so movies look and sound natural.

### Simple, Convenient Operation

Unlike Bluetooth systems, no pairing is necessary – you just activate the iPod for a wireless connection. In addition, when you turn the iPod on and off, the speaker unit turns on and off. And you can adjust the speaker volume with the iPod volume control. With most other wireless systems, you have to adjust controls on the speaker unit.

### Put the Speaker Unit and iPod Where You Want Them

Because it's a wireless system, you can put the speaker unit anywhere – up on top of a bureau or cabinet, in an out-of-the-way corner, etc. The iPod or iPhone connects to the transmitter, which is itself compact, so you can put it down anywhere or carry it around. You can also set the iPod and transmitter in the cradle horizontally for watching videos. And when in the cradle, the iPod/iPhone is charged.

### Colour Variations

The Speaker unit is available in four colours: black, blue, gray and red. Match it to your room or your iPod.
